

CASE STUDY

New Reflex Tiles Help High End Luggage Company Workers

CHALLENGE

A high end luggage manufacturing company had lines of workers who each have a very specific function. They stand in their station and take great care in one aspect of the manufacture and assembly process. There is no need for steel toed footwear, they generally wear running shoes but find that at the end of the day they feel fatigued.

SOLUTION

Installing Safe-Flex RF1 Reflex Light Duty mats reduced pain and fatigue immensely for workers.

- Workers say they feel much better at the end of a work day.
- Hoses are run under the mats utilizing the special Safe-Flex channel infrastructure and are no longer a trip hazard.
- They try to use sustainably produced materials and are so pleased Safe-Flex Reflex mats are made of recycled materials.

"We had tried foam mats but they didn't help much and wore out and tore after a few months. We are very pleased."
